

# Milestones List, Timeline, and Effort Matrix

1. Completing the queue list
- a. This includes being able to add/delete values from the list, reordering list items, saving items that are added to a local json (our temporary database)
2. Connecting the queue list to Spotify's catalog of songs
- a. This includes validating song choices to make sure it exists in the catalog, grabbing album art from the API
3. Creating a database with remote access
- a. This includes considering AWS to host data, so that anyone who is on the website can add to the queue. This will enable guests to add to the queue list
4. Connecting the queue list to the host's Spotify account
- a. This includes figuring out the API connection from the queue to the host's playing queue, and creating authentication requests

Project Gantt Chart Broken Out by Epic

Team Effort by Epic			
Feature	Responsibility Distribution		
	Justin	Lina	Sam
Basic Layout	33%	33%	33%
Queue List	60%	20%	20%
Add Song Page	60%	20%	20%
Local API	25%	50%	25%
Spotify Login Functionality	30%	50%	20%
Spotify API Integration	20%	60%	20%
